Name _____ Class _____

Section A: 20 marks
Answer all questions in the spaces provided.

1. Form 4 students were provided with the following;

- Sandy soil (50g)
- Clay soil (50g)
- Two funnels labelled A and B.
- 2 beakers with known volumes of water
- 2 measuring cylinders
- 2 filter papers

Describe an experiment the students would carry out to identify the two different textural classes of the soil. In the description, include the procedure and draw the setup of the experiment to show expected results.

2. A farmer was provided with four in-breds of maize with the following characteristics.

- Inbred **W** : early maturing
- Inbred **X** : high resistance against maize streak virus
- Inbred **Y** : short height that resists plant lodging
- Inbred **Z** : high yielding per unit area

a. With the aid of well labelled crosses, illustrate how the farmer would develop a new variety that would retain all the characteristics from the four in-breds.

6 marks

b. What method of crop improvement has been used in question **2(a).**

_____

1 mark

c. State the importance of emasculation during crop improvement.

_____

_____

1 mark

d. Briefly describe the importance of achieving uniformity as one of the objectives in crop improvement.

_____

_____

2 marks

Section B: 20 marks.
Answer all questions using the specimens provided. Follow instructions for each question carefully.

3. You are provided with the following specimens labelled **M**, **N**, **O** use the specimens to answer the questions that follow.

a. Identify the agricultural chemical labelled **N**.

_____

1 mark

b. List any two physical properties of soil sample **M**.

_____

_____

2 marks

c. Briefly describe one way in which each of the following characteristics of parent material affect pH of soil sample **M**.

i. Physical nature of the parent material.

_____

_____

_____

2 marks

ii. Chemical nature of the parent material.

_____

_____

2 marks

d. Mix specimen **N** with **M**. State any two importance of the activity performed on the productivity of soil **M**.

_____

_____

2 marks

e. State any one functional similarity between specimen **N** and **O** in agriculture.

_____

1 mark

4. You are provided with two specimens **C** and **D**. Use the specimens to answer the following questions.

a. Name any two products that can be obtained from processing specimen **D**.

_____

_____

2 marks

b. Explain any two ways in which processing of specimen **D** is important.

_____

_____

4 marks

c. The demand for specimen **C** is said to be inelastic in Malawi.

i. Why is the demand for specimen labelled **C** inelastic? Give one reason.

_____

_____

1 mark

ii. Sketch a graph to illustrate the type of elasticity of demand for specimen **C**.
